

# Getting started

OI Pulse Dashboard is a real-time Open Interest analytics tool for NIFTY & SENSEX that runs on your own Windows PC using your own Zerodha account. Your login details never leave your computer. This guide takes about 10 minutes.

## Before you begin — what you need

- A **Windows 10/11** PC with **Google Chrome** installed.
- A **Zerodha** account with **Kite Connect API** access (a Zerodha developer subscription — see Step 3).
- Your **OI Pulse license key**, emailed to you after purchase (looks like `OIPD-XXXX-XXXX-XXXX`).

## Step 1 — Install the app

1. Double-click the installer you received: `OI-Pulse-Dashboard-Setup.exe`.
2. Click **Next** → **Install** → **Finish**. No admin password is needed and no Windows settings are changed.
3. Launch **OI Pulse Dashboard** from the desktop or Start menu.

A small black status window opens and your browser opens the dashboard at `http://127.0.0.1:5069`. Keep the black window open while using the app — closing it stops the app.

## Step 2 — First-run setup (one time)

The first time you open the app, a “**Set up OI Pulse**” form appears. Fill it in and click **Save**:

| Field       | What to enter                                              |
|-------------|------------------------------------------------------------|
| License key | The key emailed to you after purchase.                     |
| Zerodha ID  | Your Zerodha client / user ID (e.g. <code>AB1234</code> ). |
| API key     | From your Kite Connect app (Step 3a).                      |
| API secret  | From your Kite Connect app (Step 3a).                      |
| Username    | Your Zerodha login ID (same as Zerodha ID).                |
| Password    | Your Zerodha login password.                               |
| TOTP secret | Your Zerodha external-2FA secret (Step 3b).                |

**Your license is tied to your Zerodha account.** Use it on as many of your own PCs as you like with the same license — it simply won't work on another person's Zerodha login. Everything you enter is stored only on your PC.

## Step 3 — Linking your Zerodha API account

---

The app logs into Zerodha for you using the Kite Connect API. You provide these details once.

### 3a. Get your API key & API secret

1. Go to **developers.kite.trade** and log in with your Zerodha account.
2. Open **My apps** → **Create new app** (this is Zerodha's Kite Connect developer subscription; a monthly fee applies as per Zerodha's current pricing).
3. Set **Redirect URL** to `http://127.0.0.1:5069`, leave Postback URL blank, and give the app any name (e.g. *OI Pulse*).
4. Create it, then open the app and copy the **API key** and **API secret** into the first-run form.

### 3b. Get your TOTP secret (external 2FA)

1. In Kite (web): **Profile** → **Settings** → **Account security** → **External 2FA / TOTP**.
2. Zerodha shows a QR code **and a text secret key** — copy that secret key; that is your **TOTP secret** for the form.
3. Finish Zerodha's setup (also scan the QR into Google Authenticator as a backup).

Keep your TOTP secret, password and API secret private — together they are what let the app log in for you. They are saved only on your own PC.

## Step 4 — Using the dashboard

---

1. Select your **Zerodha ID** and click **Save settings**.
2. Click **Capture now** — the app logs in automatically and pulls live OI.
3. It then auto-captures every minute, **Mon–Fri, 09:15–15:30**.
4. Use **New token** only if you are asked to re-login.

OI Pulse is an **analysis tool** — it does not place orders and is not investment advice.
